

3D PRINTING METAL POWDER SCREENING PRODUCTION LINE

INTRODUCTION

This product is mainly used for supporting metal 3D printers.
Recycle and reuse the residual powder after printing.
Ultrasonic cleaning system can improve the screening efficiency.
The inert gas protection system can automatically control the oxygen content of the system throughout the process, prevent the metal powder from contacting the air.

FEATURES

- Automated system.
- Safe and hygienic design.
- Inert gas protection system.
- Feeding speed can be controlled.
- Airtight design.

APPLICATION

All additive manufacturing technologies require powder management systems, such as powder fusion technology, EBM, DMLS or SLM, and a large amount of residual powder needs to be recycled after printing.
